Professional Time
Manager App Proposal

Code Name: Timebooth

Contents

1.0   Introduction

Although time management seemingly doesn't pause serious concerns to most people in developed world, most Africans still suffer from poor time management. Even at professional levels, **Professional Time Management** is still a challenge and only trained personnel manage time on behalf of many others.

Managing time at professional level, calls for a thorough understanding of the business logic, exceptions that encompass that professional undertaking, and many other factors to be consider that are dependent to each business or professional set up.

Time management in academic setting is without a doubt one of the troubling issues. The aspect involve individual level that is the student, Academic Staff, Resource utilization level and the Institution at large. Having better time management tools that addresses academic business environment is a key to huge success that everyone expects. Otherwise, improper time management for academic institution is like a wondering ship on a lost course.
